mySQL?

mySQL is an open source Relational Database management system (RDBMS) used to store, organize, and manage data. It uses (Structured Query Language) to interact with the database.

- * Database -> The place where data is stored
- * SQL -> The language used to work with the data
- * MySQL - The software that manages the database and understands SQL commands.

Eg:- store information such as student, Teacher, courses, marks.

2) Data Base:-

A database is an organized collection of related data that is stored electronically so it can be easily accessed, managed, updated, and retrieved.

Commands -

1) DDL - (Data Definition Language)

Define database structure

Common command.

CREATE, ALTER, DROP,
TRUNCATE, RENAME

2) DML - (Data Manipulation language)

*) changes data

*) INSERT, UPDATE, DELETE

3) DQL - (Data Query language)

*) Retrieves data

*) SELECT

4) TCL - (Transaction Control language)

*) manages transactions

*) COMMIT, ROLLBACK, SAVEPOINT

5) DCL - (Data Control language)

*) Controls permissions

*) GRANT, REVOKE

Databases:-

*) Collection of databases is your SQL machine.

*) Each SQL machine have collection of database and each database as collection of table

*) Each table have a collection of row & column

*) Each table have a primary key & Foreign

Key

*) Each data has a constraints
